

OFF-SET SAFETY CAGES

EASY
TO USE

OSHA
COMPLIANT

Loading and unloading cement presents a unique set of challenges and risks. Typically, cement truck loading requires three stops, increasing the risk of human error threefold.

With the new G4 Series Offset Cage, your employees are more protected than ever. The innovative cage, designed specifically for the cement industry, features flared and tapered rungs that give the lid a full range of motion while the equipment is in the working position. The design also ensures that the gangway and cage won't have any interference when the equipment is lowered on top of the truck.

An added safety feature includes, a lockdown device that allows workers to lift the gangway only when safely on the platform and while pressing the footlock assembly. Designed to be used with both SFR and SAS gangways and can be offset to either the left or the right. And, like all SafeRack products, it's built with safety and longevity in mind.

The heavy-duty aluminum withstands whatever your job or Mother Nature can dish out. Plus, the three rails on both ends, along with four rails at the hatch area, provide a sturdy and secure workspace. Additionally, it's large, 4'x7' handrail footprint allows workers the room they need to stay productive.

Features

- **Versatile**
Can Be Offset to Left or Right
- **Durable**
Heavy-Duty Aluminum Construction
- **Safe**
Four Extended Profile Rails at Hatch Access Area
- **Spacious**
4' x 7' Top Handrail Footprint
- Made with all computer control processing machinery with 0.004" tolerances at the pivots points
- OSHA compliant
- Fast deliveries available
