FLATBED TRAILER TARPING SYSTEM MADE SIMPLE AND QUICK

Keep your workers on the ground while tarping loads by using our flatbed tarping system. When a truck is in your facility, responsibility for both employee safety and the load is a priority. It not only makes sense but is critical to the bottom line.

- Reduce costs, turn trucks faster and safer
- Handheld controls guide tarps over the width of the flatbed truck
- Safe for workers because they don't climb on trucks managing hard to handle tarps
- SafeRack's truck tarping system can lift and spread up to 60 feet of tarp in one operation
- Flatbed tarping procedures can be followed to the letter with a SafeRack System

Tarping a flatbed truck and its load is time-consuming and dangerous. SafeRack's flatbed tarping systems are engineered to be safe for driver and save time, increasing truck turn. It enables a single user to tarp a load and never leave the ground. It doesn't get any safer than that.

Features

- Proudly made in the USA
- Multi-Point Spreader bar attachment prevents the bar from swinging
- Can utilize existing structure or a freestanding enclosure
- High-quality winch for long life
- High-quality components throughout
