

OFF-SET SAFETY CAGES

**EASY
TO USE**

**OSHA
COMPLIANT**

**LONGER
LASTING
DESIGN**

The G4 Series Off-Set Cage features flared and tapered rungs that give the lid a full range of motion while the equipment is in the working position. The design also ensures that the gangway and cage won't have any interference when the equipment is lowered on top of the truck.

The innovative cage, designed specifically for the cement industry, features a lockdown device that allows workers to lift the gangway only when safely on the platform and while pressing the footlock assembly.

It's designed to be used with both SFR and SAS gangways and can be offset to either the left or the right. And, like all SafeRack products, it's built with safety and longevity in mind. The heavy-duty aluminum withstands whatever your job or Mother Nature can dish out. Plus, the three rails on both ends, along with four rails at the hatch area, provide a sturdy and secure workspace. Additionally, it's large, 4'x7' handrail footprint allows workers the room they need to stay productive.

Features

- Heavy-duty base tread upright
- One-piece stair design reduces welds & failure/repair costs
- Optional SafeLok system locks gangway into position (does not rest on the vehicle)
- Rubber bumpers for vehicle protection
- Elongated last tread for an increased working area at the end of gangway
- Extra-strong tube design for safety cage mounting
- Construction material choices are – aluminum, galvanized or stainless steel
- Made with all computer control processing machinery with 0.004" tolerances at the pivots points
- Shipped fully assembled – just bolt on the safety cage if included
- OSHA compliant
- Fast deliveries available
